

- Collection frameworks
- Vector class
- Enums in Java

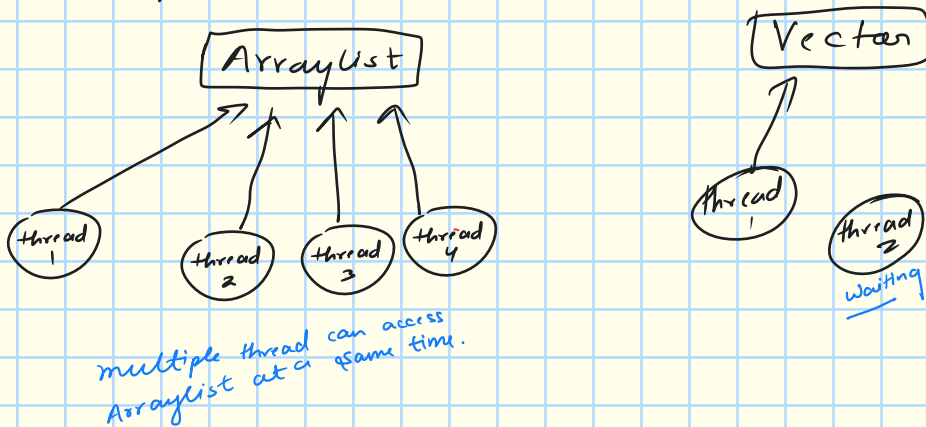

List (parent class)

Vector Synchronization.

If one thread is using then other have to wait

- * Their implementation is same but this is internal difference.
- * ArrayList is faster than Vector.

Enums in Java

↳ group of variable which you cannot change.

ex:-

```

public class Basic {
    enum Week {
        Monday, Tuesday, Wednesday, ..., Saturday, Sunday
        // these are enum constants
        // by default -> public, static & final
        // since its final you can create child enum
        // type is week
    }
}
  
```

```

psvm(...) {
    Week week;
    week = Week.Monday;
    for(Week day : Week.values()) {
        print(day);
    }
}
  
```
